DETAILED ACTION

This application filed January 30, 2002, is a national stage entry of PCT/IB99/02020 filed December 16, 1999, which is a continuation in part of 09/217,694 filed December 21, 1998, now US Patent 6,548,733.

Claims 1-17 are pending and currently under examination.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3, drawn to a method of using genetically modified *Drosophila* strains to screen for compounds that affect an activity or function that is critical in the development of an easily detectable phenotype.

Group II, claim(s) 4-14, 16, 17, drawn to a method of using genetically modified larva wherein the genetic modification affects the development of the imaginal disk into a mature structure.

Group III, claim(s) 15, drawn to a genetically modified *Drosophila*.

Art Unit: 1632

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

A) The inventions of groups I through III have been found by the Examiner to have no special technical feature that defined the contribution over the prior art. In the instant case, methods of screening genetically modified *Drosophila* or larva, for example by genetic complementation, are known in the prior art. In addition, as disclosed in the instant specification transgenic *Drosophila* with modifications of known oncogenes also are known in the prior art. Each of the broad independent claims of groups I, II and III would be anticipated by the prior art.

B) Unity of invention between different categories of inventions will only be found to exist if specific combinations of inventions are present. Those combinations include:

- A) A product and a special process of manufacture of said product.
- B) A product and a process of use of said product.
- C) A product, a special process of manufacture of said product, and a process of use of said product.
- D) A process and an apparatus specially designed to carry out said process.
- E) A product, a special process of manufacture of said product, and an apparatus specially designed to carry out said process.

The allowed combinations do not include multiple products, multiple methods of using said products, and methods of making multiple products as claimed in the instant application, see MPEP § 1850. In this case each of the groups are drawn to different methods and a product known in the prior art. Since Applicant's inventions do not contribute a special technical feature

Art Unit: 1632

when viewed over the prior art they do not have single general inventive concept and lack unity of invention.

Because these inventions are distinct for the reasons given above have acquired a separate status in the art as shown by their divergent subject matter restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
